ODYSSEY BATTERIES INTRODUCES NEW

DIRECT FIT HARLEY DAVIDSON 1997 AND LATER FLHR, FLHT & FLTR BATTERY

ODYSSEY PC 925LMJ

WARRENSBURG, MO., USA -- ODYSSEY® Drycell™ Batteries of EnerSys Inc., Reading, PA, is introducing effective July 1, 2003 the new ODYSSEY model PC 925LMJ, a left positive terminal version of the ODYSSEY PC 925MJ battery previously offered for the 1997 and later Harley Davidson FLHR, FLHT and FLTR Touring models.

The PC 925MJ was the previously recommended battery for these bike models, but the reverse terminal polarity required reversing or crossing the battery cables. The new PC 925LMJ mounted as a side terminal design is now a direct replacement to the Harley Davidson battery P/N 66010-97A or aftermarket batteries, i.e., YB30L-B or YIX30L. ODYSSEY Batteries are designed to meet military battery performance levels and offer 12-year design life, sealed operation for no external acid leakage or gassing which causes corrosion and damage to paint and chrome. Solid brass terminals provide permanent cable connections. ODYSSEY provides outstanding performance and value, 925 amps of 5 second HCA (hot cranking amps) starting power, the highest in the industry and 6-10 years of service life. ODYSSEY has the industry exclusive 2 year full warranty against factory defects in material or workmanship, has a 2 year shelf life when stored at 77°F to 50% state of charge and can be shipped hazardous free as a non-spillable battery by UPS and FedEx, ground or air transport. ODYSSEY Drycell Batteries are Simply The Best.™
